Waterproofing Layer, Wecryl 233  
Wearing Layer, Wecryl 288 Sealer Coat  
+ Tile Effect + Black/White Deco Chips  
Specification: Wecryl Waterproofing System  
Completion: December 2015

Balcony Refurbishment, Eindlyk, Hythe, Hants.

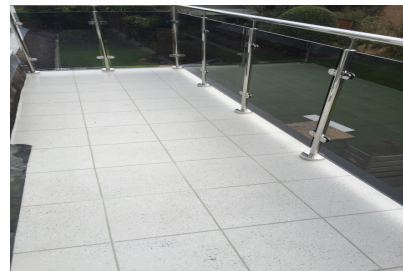

## Wecryl Waterproofing System

WestWood Liquid Technologies Wecryl Waterproofing & Balustrade System was successfully used on a balcony in Hythe, Hants. WestWood Approved Installers, Protec Roofing Ltd, cleaned and prepped the existing substrate. Firstly, Wecryl 276 Primer Layer was applied following the Waterproofing Layer

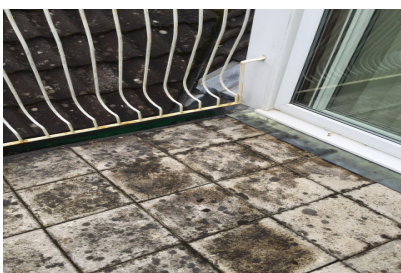

Wecryl 230. After the Waterproof Layer cured a two component Protective Layer known as Wecryl 233 was installed. The system was completed by using a Tile Effect Finish with our Wecryl 288 Sealer Coat in RAL7035 including black/white Deco Chips to provide some slip resistance.

BEFORE  
REFURBISHMENT

AFTER  
REFURBISHMENT

1. Balcony prior to any preparation work and cleaning, ready for the priming and waterproofing to commence

2. Continued with Wecryl 230 Waterproofing, Wecryl 233 Protective Layer & finished with a Wecryl 288 Tile Effect Layer using Deco Chips as additional slip resistance

3. Finished refurbished balcony, installed in conjunction with new Glass & Stainless Steel Balustrade System
