Wecryl 230, Wecryl 230thix,
Wecryl 288
Completion: July 2016

Warner
Contracting Ltd

As this was a light well courtyard roof that is overlooked by five floors, the architect wanted something that was visually interesting and pleasing. Initially coloured gravel and rubber crumb had been mentioned, but this wasn't practical to install.

Wecryl Decorative Roofing Solution Coating

WestWood's Wecryl 230 Waterproofing was combined with an additional Wecryl 288 coloured Sealer Coat.

The Wecryl waterproofing was easily and quickly applied to the existing felt membrane. The liquid waterproofing could easily be installed around any awkward detailing or up-stands. As the products can be self-terminated, no chases or unsightly termination bars were required.

The additional layer of Wecryl 288 created the different coloured finish. This product can be mixed to most RAL colours to provide great design options.
