

Key:

StrataBit Capsheet

StrataBase Underlay

Strata Angle Fillet

Use a strip of StrataBit Capsheet and StrataBase Underlayment to form the skirting to upstand. Ensure all waterproofing terminates a min. 150mm above the finished roof level.

Ensure the waterproofing terminates min. 100mm from the bottom of the cladding as indicated.

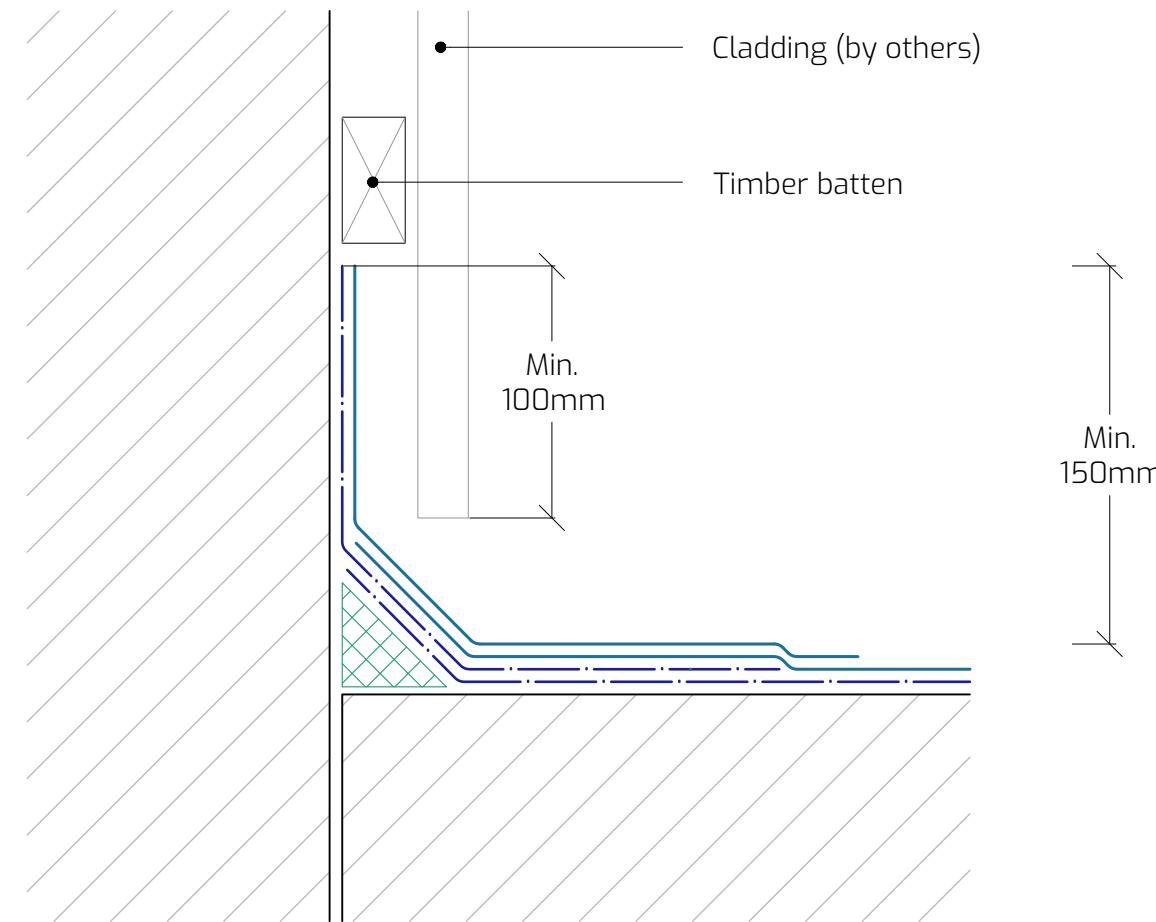

When utilised, any breather membrane behind the cladding system should discharge over the waterproofing system upstand.

Any upstand in excess of 250mm should be mechanically fixed at the leading edge with appropriate fasteners in order to avoid slippage of the waterproofing membrane

The system build-up and application should adhere to the STRATA issued specification.

All surfaces must be clean, dry, and suitably prepared to accept the waterproofing system.

All details should be installed in full compliance with the most up-to-date NHBC Standards, BS 8217, BS 6229, and STRATA recommendations.
