

Key:

StrataBit Capsheet

StrataBase Underlay

Strata Angle Fillet

StrataShield PU Mastic

**Construction Notes:**

Use a strip of StrataBit Capsheet and StrataBase Underlay to form the skirting to upstand. Ensure all waterproofing terminates a min. 150mm above the finished roof level.

Carefully cut out the chase to a depth of min. 25mm.

Install a suitable lead-free counter flashing to the chase, lengths shouldn't exceed 1.5m and should have a lap of min. 100mm. The lead should provide a min. 75mm counter flashing.

Any upstand in excess of 250mm should be mechanically fixed at the leading edge with appropriate fasteners in order to avoid slippage of the waterproofing membrane.

The system build-up and application should adhere to the STRATA issued specification.

All surfaces must be clean, dry, and suitably prepared to accept the waterproofing system.

All details should be installed in full compliance with the most up-to-date NHBC Standards, BS 8217, BS 6229, and STRATA recommendations.
