

Key:

EPDM Membrane	---
StrataPlan Detail Membrane	—
Hot Air Weld	
StrataPlan GF Membrane	—
StrataPrime Fleeceback Adhesive	~~~~~
StrataTherm Insulation	~~~~~
StrataShield Air & Vapour Control Layer	—

Alternative Detail**Construction Notes:**

A strip of StrataPlan GF Membrane should be brought over the detail to finish below the sill. Alternatively, a StrataPlan Metal Angle can be utilised as indicated.

Mechanically fix the termination bar or StrataPlan Metal Angle at 150mm centres or as per the site specific wind-load location.

The sill should project min. 45mm over the terrace area with a drip min. 30mm away from the face of the upstand to shed water away from the interface with the waterproofing layer.

The system build-up and application should adhere to the STRATA issued specification.

All surfaces must be clean, dry, and suitably prepared to accept the waterproofing system.

All details should be installed in full compliance with the most up-to-date NHBC Standards, BS 6229, and STRATA recommendations.

Sill projecting min. 45mm with a min 30mm drip away from the face of the upstand.

Finished floor level

Min. 45mm

Min. 75mm

Termination bar/tube washer with suitable fixing
